

# SLIDE JAMMER - 2 PACK

Lock, Restrict or Open Your Entry Points

Product Code: HA00806

## Introduction

The Solon Slide Jammer is a multi-purpose, easily installed device designed to bring security and convenience to your property.

Stick the metal Ratchet to your sliding windows, doors or any other suitable opening and utilise the Jammer to either lock, restrict or open the entry point.

Withstanding forces of up to 150kg, the Slide Jammer allows you to either completely lockdown an opening from intruders, allow a small secure gap, or completely open up for authorised access, all with a simple press and slide device.

## Contents

2 x Jammers	2 x Jammer holders with adhesive pads
2 x Ratchets with adhesive pads	2 x Alcohol-based cleaning wipes

## Installation and Operation

### Positioning

On windows or doors, the Ratchet should be placed on the stationary pane that is overlapped by the opening pane. The flat end of the Ratchet should always point towards the centre rail. Install high up to prevent child usage, or low down for maximum convenience.

### Installation

The Slide Jammer is suitable for installation on all materials including glass, metal, UPVC and wood. No screws or tools required! Install in three easy steps:

1. Wipe down the desired area using the cleaning wipes provided and let dry for approximately 1 minute.
2. Peel the adhesive liner from the rear of the Ratchet.
3. Apply the Ratchet firmly to your desired location.

For the Jammer holder, repeat steps 2 and 3 as above. No pre-treatment is strictly needed as the holder shouldn't encounter any force, though you can wipe down the area if you wish.

## Operation

After installation of the Ratchet the Jammer can be utilised as required. Press down the metal lever on the Jammer and slide it securely into the Ratchet. Once inserted, the Jammer can be smoothly moved along the Ratchet as required by simply pressing down on the metal lever again, including for complete removal.

**NOTE:** the Jammer can be inserted from either the flat or round end of the Ratchet, but the metal lever must always be facing the grooves on the Ratchet. If not, no locking or restricting is possible.

If positioned accurately, securing the Jammer at the closest point to the flat end (until you hear a click) should result in your entry point being completely locked against opening.

From here, clicking and sliding the Jammer along the ratchet will allow your entry point to be partially opened, but still secured.

To allow full access to your entry point, click and slide the Jammer out of the Ratchet entirely. Utilise the Jammer holder for safekeeping and quick redeployment.

## Removal

The Slide Jammer is designed to stay strongly in place in the face of external force and it not designed to be removed and redeployed.

Should you need to remove the unit we recommend the use of garden or fishing wire, ideally whilst wearing gloves. Remove the Jammer and simply manoeuvre the wire underneath the Ratchet from the flat end, pulling along the length until the Ratchet prises away from the surface. You may notice some adhesive residue remaining on the surface; this is normal for adhesive pads and can be washed away utilising warm water and an appropriate cleaning agent if required.

## Care and maintenance

Avoid moving the Jammer up and down the Ratchet without first pressing the metal lever, this can cause damage to both the Ratchet and the mechanism.

During regular use you may notice some grey flecks appear on the Ratchet. This is simply residue on the white paint from the bottom of the Jammer; this is normal and can be wiped off with either a wet or dry wipe.

The provided cleaning wipes are Ethyl Alcohol based and, as a precaution, should be kept away from children.

Though skin contact is not hazardous, it is recommended you wash your hands thoroughly with warm water after use and seek medical assistance in the event any irritation occurs.
