DECOY CAMERA WITH IR LEDS

Realistic Alternative to CCTV

Product Code: CC00432

Introduction

The Decoy Camera with IR LEDs is a great, low cost solution to deter burglars. The product has been designed to be indistinguishable from a real CCTV camera, including incredibly realistic Infra-Red LEDs. The built-in dusk till dawn sensor ensures these LEDs only glow at night, adding even more weight to the authenticity. The camera is suitable for outdoor use.

Contents

Decoy Camera with IR LEDs
Plastic Wall Plugs
Screws
AA batteries

Operation

The camera operates on 2 x AA batteries which should provide approximately 12 months use. The batteries operate 25 IR red LED's which can only be seen in the dark. These red LED's simulate a real infrared CCTV unit. The Decoy Camera can be used indoors or outdoors.

Before first use, install the batteries. Open the camera by rotating the front part of the housing anti-clockwise, before carefully removing the battery compartment. Open the battery cover and insert 2 x AA batteries, noting the correct polarity. Put the battery cover on and slide the camera cover back onto the unit

Slide the battery compartment back into the housing as far as it will go. When doing so, the battery compartment must be aligned with both guide rails inside the housing. Close the housing and make sure the battery compartment locks into place properly, in order to guarantee the weatherproof properties of the device.

Replace the batteries as soon as the red LED stops flashing or flashes just slightly.

Installation

The camera can be used in both internal and external locations and can be installed using the screws and wall plugs provided.

To mount the camera, place the unit against the wall and mark the location of the two holes. Drill the holes and then place the plastic wall plugs into the holes. Hold the camera over the plugs and insert the screws to secure the camera.
