Glow-in-Dark 9 LED Torch

Luminous green aluminium torch

Product Code: OT01462

Introduction

The pocket-sized torch features 9 bright LEDs which produce a 70 lumen beam, with the luminous green casing ensuring it can be quickly found in low-light conditions, such as in times of emergency or power cuts.

Contents

1 x 9 LED Glow Torch with carry strap

3 x AAA Batteries (installed in torch unit)

Operation

Before first use, unscrew the tail cap of the torch anti-clockwise and remove the plastic battery tab. Re-screw the tail cap clockwise and press the tail cap button to switch the torch on. Press the button again to turn the torch off.

The luminous body of the torch is designed to absorb light, enabling it to glow green in the dark for easy locating. Keeping the torch in a convenient, well-lit area during daylight hours will maximise the amount of light it absorbs and increase the amount of time it glows after dark.

Battery Replacement

To replace the batteries, unscrew the tail cap of the torch anti-clockwise. Remove the battery compartment by tilting the torch towards you slightly. Remove the existing batteries and replace with new batteries, ensuring the correct polarity as indicated on the battery compartment. Re-insert the battery compartment into the body before replacing and re-screwing the tail cap clockwise.

WARNING
Do not look directly into light source, do not point directly into the face of others.
